PROFESSIONAL SUMMARY

QA Engineer with 1.5+ years of hands-on experience testing complex ERP and fintech platforms. Specialized in business logic validation, API testing, and Python automation. Strong technical foundation including Django backend knowledge, SQL, and Linux server administration — enabling deep root-cause analysis beyond surface-level testing. Proven ability to find edge cases in payment systems, role-based permissions, and multi-tenant architectures.

TECHNICAL SKILLS

Manual Testing	Test design, regression, smoke, edge cases, business logic validation
API Testing	REST API, Postman, Curl, JWT, OAuth, status code & response validation
Automation	Python, Selenium, Pytest, factory_boy, pytest-html, Excel reporting
Backend & DB	Django, Django REST Framework, PostgreSQL, SQL queries
DevOps	Linux/Ubuntu, Git, Docker (basic), SSH, server deployment
Frontend	HTML, CSS, React (basics)

PROFESSIONAL EXPERIENCE

QA Engineer Jul 2024 — Present

Deepen ERP · Tashkent, Uzbekistan · ERP / B2B SaaS for fitness clubs and sports facilities

- Lead manual and automation testing of a multi-tenant ERP platform managing membership, payment, trainer scheduling, attendance, inventory, and reporting modules.
- Validate complex business logic including split payments, role-based permissions, multi-location merchant flows, and edge cases that surface only under real-world load.
- Built and maintain Python + Selenium + Pytest automation suites with factory_boy fixtures and pytest-html reporting; reduced regression cycle time and increased coverage.
- Test Django REST Framework APIs using Postman and Curl — covering authentication (JWT), validation, status codes, and response time benchmarks.
- Write and maintain detailed test cases, regression checklists, and structured bug reports with clear reproduction steps and severity classification.
- Collaborate with backend developers using SQL queries, Django ORM, and server logs to root-cause issues and verify fixes at the database level.

SELECTED PROJECT

Deepen ERP — Fitness & Sports Management Platform

A comprehensive ERP system for fitness clubs and sports facilities, handling membership lifecycles, payment processing (including split payments), trainer scheduling, attendance, inventory, and full financial reporting. As QA Engineer, owned testing across manual, API, and automation layers, with deep validation of the business logic underpinning the entire revenue model.

Stack: Python, Django, Django REST Framework, PostgreSQL, React, Selenium, Pytest, Postman, Linux, Git, Docker.
